A CASP inspired hackathon for glycoscience methods

Developing methodologies and techniques for glycoscience research

CLAUDIA LETICIA GOMEZ FLORES
MPI FOR SOLID STATE RESEARCH, STUTTGART, DE

Why are glycans hard?

- **Branched** and not template driven
- **Isomeric diversity** in linkage and anomeric form driven
- **Ambiguous** mass spectrometry data

What is missing?

Machine readability

Multiple coexisting nomenclatures and representations

SNFG **IUPAC** **Oxford** **Linear code**

Harmonized resources

Scattered data sources

GlyConnect GLYCOEXPASY

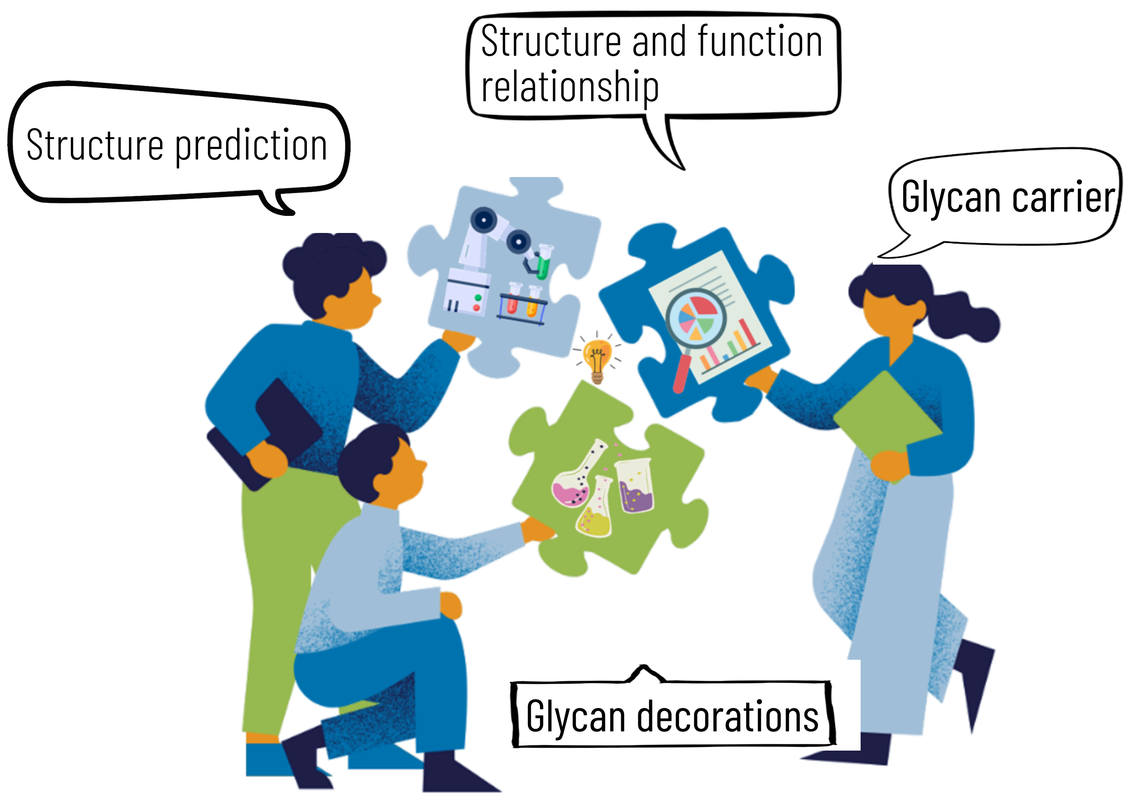

GlyGen

Ground truth, "PDB" equivalent

FAIR principles

Connectivity

The hackathon

Evaluation and outcomes

Approach **Novelty** **Reproducibility**

Open archive: Code, data and outcomes from all teams archived into open repository.

Joint publication: Results are compiled and documented.

Benchmark: This format encourages a shared evaluation framework.

Exposed gaps: Each group sees where its owns method fall short.
